

CASSera

Card Attachment Secure System

The economical, compact and secure card attachment system

Bell and Howell has teamed with Otto Künnecke to offer a secure card attachment system specifically designed for environments where lower-volume processing is needed. With a throughput of up to 2,000 cards per hour, the CASSera system is the perfect solution for small to medium-sized applications.

The CASSera can also be used as a back-up system for existing card attachment operations. With the smallest footprint in the CASS series, it has a compact design and is the first heavy-duty 7 x 24 industrial mailing system in this price segment.

High-quality materials and a sturdy design guarantee longevity and offer a high degree of return on your investment.

Its ease of use reduces setup times. The CASSera is able to run both with single-sheet feeder, and integrated with a single-sheet printer. Due to its modularity, it can easily be upgraded from a basic system with carrier printing and card attachment to an expanded solution including folding, enclosure feeding and inserting modules. It can also be equipped with a variety of reading devices.

The CASSera can process a wide range of formats and offers the reliability of a high-end card mailing system at a price low-volume mailers will enjoy.

KEY FEATURES

- » Processes up to 2,000 cards per hour
- » Compact, sturdy design
- » Designed and priced for small-to medium-sized mailers
- » Runs both on-and offline
- » Modular design allows for customized upgrades
