

CLEVERON 401

Robotics-Based Automated Pickup Tower

Enhance the In-Store Pickup Experience

The Cleveron 401 is a 16-foot-tall, automated self-service package storage, retrieval and returns system. Perfect for delivering 50-200 packages-per-day, the Cleveron 401 uses a robotic 3-D lifting system to dynamically store and retrieve packages in as little as 10 seconds.

With a total footprint of only 72 Sq. Ft. and storage capacity of 500+ variably sized packages, the Cleveron 401 offers retailers an efficient, enticing, quick and easy-to-use solution to improve customer retention as they grow their buy online pickup in-store (BOPIS) program.

How it works:

1. Customer places order online or via the retailer's app or web browser
2. Once order is inducted in the Cleveron 401, customer is notified via email or text of their pickup code
3. Customer scans their code and receives their order in less than 10 seconds

Key Features & Benefits

Automated process lets customers retrieve their packages in under 10 seconds

Convenient drop-off point for customers, expediting inventory returns

Holds three times the capacity of traditional smart lockers in just 72 SQ.

The Cleveron 401 is designed to automate indoor and outdoor package storage, pickup and return operations, delivering the easiest and most convenient retail experience on the market.

Improve NPS Scores and Customer Retention

The best retail technology serves and improves multiple processes. As shoppers increasingly adopt and use BOPIS programs, retailer's current manual pickup processes will become difficult to manage and scale effectively to meet customer expectations.

The Cleveron 401 empowers retailers to more effectively and securely store and manage pickup inventory to simplify and streamline internal processes. The adaptable software easily integrates into your organization's API and OMS systems.

Reduce the time it takes to induct packages to as little as 7 seconds and customer pickup times to as little as 10 seconds. Customize the color and vinyl wrapping of your Cleveron 401 to promote your unique brand and marketing initiatives. Retailers can also pair an indoor Cleveron 401 with Cleveron's Combo Lockers and operate both products from the same console, to expand your storage capabilities for larger ticket items, such as TVs and furniture, while ensuring a streamlined customer experience.
