

iQ SOFTWARE SUITE

Factory Intelligence Software Solutions

Real-Time Visibility and Data Analysis

Securely Manage and Track All Jobs, Resources and Employees

Bell and Howell's iQ Software Suite is a comprehensive accumulation of several industry leading production, material, tracking and communication software solutions tied into one modular and scalable solution. From optimizing your production resources, to tracking data and job efficiency, the iQ Software Suite helps to securely manage, automate and raise your productivity in virtually every business process.

iQ provides workflow management and real-time data analysis of your production print and mail environments, from an individual production process to an entire document factory. Deliver 100% data integrity while securely tracking and managing every communication piece with a detail audit trail in one or many production areas.

Key Features & Benefits

Track and manage every communication item throughout the operation

Increase the quality, integrity and relevancy of every customer communication

Optimize the performance and efficiency of your entire operation

Bell and Howell's iQ Software Suite empowers you to manage the efficiency of your entire operation, independent of equipment types. Do it all with this one modular and scalable solution.

Dynamic, Automated Reporting

Optimize The Performance and Efficiency of Your Entire Operation

In the manufacturing industry, it is essential to have timely, accurate production reporting to make important business decisions. Typically, plant managers have little to no visibility into production factory operations, or have only outdated manually collected information. Real-time access to production data and reports has a major impact on increasing the effectiveness and efficiency, and ultimately the cost, of the manufacturing process.

All of the iQ solution modules have dynamic, web-based reporting and analysis capabilities to consolidate and

interpret the information captured and managed from your communication production processes. Data can be scheduled for exports in an industry-standard data format for offline analysis or using unique customizable reporting requirements. Reports and analyzed data can be securely viewed online internally and by external customers. iQ is comprehensive in nature and can accommodate any requirement needed to ensure that you continue to make the best business decisions to keep your operation running effectively and efficiently.

iQ Offerings

- ▶ **iQ Item:** Piece-level tracking across any resource
- ▶ **iQ Production:** Real-time resource, job and operator efficiency tracking and reporting
- ▶ **iQ Quality Assurance:** Electronic tracking and reporting of quality checks
