JETVision

Comprehensive Production Quality and Integrity Verification Solution

JETVision

Purpose-Built, High-Speed Area and Line Scan Inspection

JETVision is an application-based suite of hardware and software data collection technology, built for your unique line-level production quality and integrity validation needs. Using a dynamic range of high-speed area scan and line scan technologies, JETVision performs quality checks, sequence verification, unique identifier matching, file-auditing, read-to-print processing and image capturing supporting virtually any application requirement.

Area Scan Camera Systems

An area scan inspection system is better suited for production environments that have more sporadic, variable speed throughputs. These cameras captures a high-resolution image of a defined area instantly, as opposed to scanning an entire document. The flexible configuration allows for rapid, hassle-free installation, anywhere on a piece of equipment. The area scan inspection system is also capable of customized, multi-camera implementations.
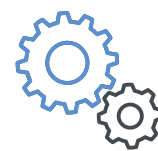

Key Features and Benefits

Detailed, line-level inspection on every piece	Dynamic range of area and line scan technologies	Supports virtually any application requirement

> JETVision is a comprehensive suite of production quality and integrity validation systems. Complete with a dynamic range of area and line scan technologies, JETVision supports virtually any application requirement and normalizes data for mail manufacturing environments.

Line Scan Camera Systems

Our line scan inspection system is ideal for high-speed continuous motion production environments. Line scan uses a single row of pixels to build a high-resolution image of an entire document. Using this system, we can customize a solution that allows for multiple regions of interest to be captured simultaneously with one camera in a single pass.

JETVision Slim

JETVision Slim is a self-contained, high-speed, 12" line scan vision solution. Capable of inspecting documents from the top or bottom simultaneously, this purpose-built system can support a wide range of job formats and applications.

JETVision VX

JETVision VX is a versatile, movable validation solution that combines JETVision Line Scan verification technology with an integrated vacuum transport system. This comprehensive, versatile solution is ideal for independent validation processing in-line or in a standalone configuration meeting numerous operational requirements with one unit.

Bell and Howell Service Solutions

Transforming Business Challenges Into Competitive Advantages

Maximum uptime and availability starts here. From an extensive service footprint, 40,000+ parts at 40+ stocking locations, to the best software service and support in the industry, we've got you covered. By combining turnkey project management, advanced data analytics and flexible maintenance plans, you'll have the complete solution to ensure that your mail manufacturing environment continues running efficiently.
