

CASSilo

Card Attachment Secure System

The beginning of a new card mailing generation

Bell and Howell has teamed with Otto Künnecke to bring the CASSilo card attachment secure system to the North American market. This system is designed to meet the needs of medium-volume card attachment operations where reliability is paramount.

CASSilo is the reliable 7 x 24 answer for your card mailing requirements: it is flexible, modular, easy to operate and is the perfect solution for small batch handling. The CASSilo is designed to run in multiple environments. It supports an array of data types and reaches a throughput of more than 3,000 cards per hour. The system is operator friendly and easy to set up. The CASSilo can be equipped with various modules, including card processing and form feeding. With the card attachment module, up to 8 cards can be selectively affixed on the carrier.

The CASSilo can also encode cards with unique customer information. A high-integrity inserting module can be integrated, enabling an end-to-end finishing process. The CASSilo is highly flexible in optimizing and reducing set-up times: Microsoft Word templates can be used to print the card carrier, allowing easy integration with virtually any operational environment.

KEY FEATURES

- » Designed to run in a 7 x 24 environment
- » Can process more than 3,000 cards per hour
- » Can be operated on- or offline
- » Can handle up to eight card attachments per document
- » Encodes cards with unique customer information
- » Allows card personalization with easy-to-use Microsoft Word templates
